

Save Time and Focus on Product Design

The integration between Omnify Software and Mentor Graphics helps engineers to easily find critical product data, eliminate mundane paperwork tasks, increase productivity, and remain focused on designing new products.

Key Benefits:

Omnify Software provides a single, secure environment to manage component data, Bill of Materials (BOMs), engineering changes and product documentation.

Integrating Mentor Graphics DxDesigner with Omnify Empower enables collaborative design *directly from the engineering desktop*.

- Simplify component data and library management
- Centralize product data/streamline ad hoc databases
- Gain easy access to current part and BOM data
- Automatically manage all BOM revisions and ECOs
- Enhance collaboration with external partners
- Easily communicate design data with manufacturing
- Remain focused on designing new products
- Quickly find critical design data
- Eliminate manual data entry errors
- Reduce prototype errors
- Increase productivity

Simplify Component Data and Library Management

- Read BOMs and released design documentation from Mentor into the Omnify Empower database
- Access part data such as: Attributes, Documents/Datasheets and Vendor Information
- Manage all 'released' documents (Schematics, Assembly Drawings, PCB Files, Gerbers, datasheets) in a central location

Make Better Design Decisions

With direct links to manufacturing systems, Omnify Software provides a platform to integrate engineering data with business information, giving engineers the opportunity to leverage an extended component data set that includes information such as: cost, lead times, status, 'where used', availability, and more, to further improve the engineering design decision-making process.

Access an Engineering Sandbox

Omnify provides an Engineering Sandbox to create, modify and organize BOMs prior to release without logging into the Omnify Empower system. With the Engineering Sandbox you can:

- Create prototype BOMs
- Create custom reports
- Verify design data
- Finalize BOMs

"Our previous process to import a Parts List from a schematic took well over an hour to complete (for every Parts List) and now it takes only a few minutes. Checking an ECO has also been reduced from a full day to only a matter of seconds due to the redlining capability of Omnify Empower."
- Richard Sharples, CAD Engineering Manager, Nujira.
